

When you receive one or multiple Labdoo laptops, please **do not** reinstall Windows, but **stay with the installed OS Linux.**

Here are the reasons why:

- Linux is 50 - 100% faster than Windows. Reinstalling Windows will make the laptop(s) extremely slow.
- Linux includes more than 300 free educational programs.
- Linux comes with a complete and free Office Suite, similar to Microsoft's WORD, EXCEL, POWERPOINT etc.
- Linux is invulnerable by viruses, so no virus problems anymore
- Many Windows versions (XP, Vista, Windows 7) are already or will become soon outdated and will not be updated / maintained by Microsoft anymore. Linux instead is up-to-date, patched, secure and LTS (Long Term Supported).
- Labdoo installed on your laptop more than 1'000'000 ebooks, video tutorials and wiki pages in local language(s) for you - a huge library.
- Labdoo runs a **Global Support** program (LGS) for you which will only work on and with original Labdoo laptops.
- You will find Labdoo video tutorials on each desktop in the videos folder
- ...and the best of all – look & feel is like you are used to
